Activity on Artificial Intelligence

Hello everyone! It's great to be together again! Today we are going to continue our adventure in the world of Artificial Intelligence.

Do you remember what Artificial Intelligence is? Let's find out together!

Think with me! Artificial Intelligence is the intelligence that computers can have.

But that's not all! We can find Artificial Intelligence in many places, such as mobile phones, video games, and even toys.

But pay attention, adventurers! Artificial Intelligence does not learn on its own! We are the ones who teach it everything. If no one teaches it, it doesn't know what to do!

And here comes something very important: If we teach correctly, Artificial Intelligence learns correctly and can help us when we need it! But if we teach something wrong, it also learns wrong! That's why we must teach carefully.

Well done, little adventurers! Now that we remember all this, how about a fun activity? Look at the table!

See the circles numbered from 1 to 6! Grab your colored pencils! In circle 1, color with your favorite color. In circle 2, choose your second favorite color. Keep going until you've colored all six circles! Do your best! I'll be here waiting for you.

Very good! Wow! Your circles look amazing! Now, let's have some fun with them! Attention! Circle 1 represents you! The other circles represent people and things that are important to you! Look at the table! You have a sheet with the names of people and things you love!

Mom, dad, and siblings. School friends. Your best friend. Your teachers. And finally, there's also Artificial Intelligence!

Now, think carefully! Who do you share the most important things with? Who helps you when you need it?

Scissors and glue in hand! Let's cut out and decide in which circle each person or thing should go! Do it with care! When you finish, we'll talk about privacy!

Now, let's think together! There are some things we can share with everyone, others only with special people or those who are very close to us. But some things belong only to us! This is called privacy.

Privacy is like a secret that belongs only to you! Only people you trust should know about it!

And what about when we talk to something that has Artificial Intelligence? Artificial Intelligence is great for answering questions, solving doubts, and even telling stories and jokes! But we don't need to tell it everything about ourselves! Some information is just for us and should only be shared with people we trust.

Now, in the next activity: look at these pictures! Cut them out and think: Who can I share this with? Then, place each picture in the corresponding circle! Do your best! It was a pleasure talking with you today! See you in the next activity!
